MARBLE TABLET IN MAIN HALL OF HOSPITAL.

THE
CHARITY HOSPITAL
OF LOUISIANA,
WAS FOUNDED IN THE YEAR 1786
BY
DON ANDRES ALMONASTER Y ROXAS,

To whose generous endowment, the munificence of the Legislature of
this State, and the liberality of the

STATE OF PENNSYLVANIA,

The community is indebted for the means of erecting this edifice, built in
the year

MDCCCXXXII.

His Excellency A. B. Roman, being Governor and Ex-Officio President
of the Institution.

*To record which and inscribe hereon the names and contributions of its
distinguished benefactors,*

THIS TABLET HAS BEEN ERECTED.

Etienne Boré, - -	\$1,000 00	Stephen Henderson,
Robert Cune, - -	1,000 00	Cotton Press property
Julian Poydras,		Estimated, - - - \$45,000 00

REPORT
OF THE
BOARD OF ADMINISTRATORS OF THE CHARITY HOSPITAL,
For the Year ending December 31st, 1884.

To his Excellency S. D. MCENERY, Governor of the State of Louisiana, Ex-Officio President of the Board of Administrators of the Charity Hospital:

Your Excellency—The close of this year, which has witnessed the inauguration of the World's Cotton Centennial Exposition in New Orleans, marks also the opening of an entirely new epoch in the history of the Charity Hospital. It may, therefore, not be inappropriate to pass in review a few landmarks connected with that noble institution, although its history was fully presented in one of the annual reports a few years since. My authority for the following facts is Gibson's Guide and Directory of the State of Louisiana and the Cities of New Orleans and Lafayette, for the year 1838.

"The first hospital for indigent persons erected in the City of New Orleans appears to have been built on the site formed by the west side of Rampart street, between Toulouse and St. Peter streets. It was blown down by a hurricane in 1779, and being of wood, was entirely destroyed.

"In 1784, Don Andres Almonaster Y. Roxas erected one of brick, on the same position, at a cost of \$114,000, which he completed in 1786, and entitled it the "New Charity Hospital of St. Charles," endowing it, moreover, with a perpetual revenue of \$1500 per annum, by appropriating rents of the stores at the corner of St. Peter and Levee streets. It continued under the patronage and direction of the family until March, 1811, when it was relinquished to the City of New Orleans by authority of

the Legislature, previous to which the edifice was burnt down. It was now subjected to a council of administration, appointed by the Governor and City Council—the first six, the latter three.

“In 1813, the Council was solely appointed by the Governor and Senate, as at present, and it now consists of eight members and the Governor. Its support has been derived from various sources.

“A most liberal legacy was left it by that public benefactor, Julien Poydras, of real estate valued at \$35,000; by E. Boré, of \$2000, and by R. Cune, of \$1000. The first aid extended to it by the State was in 1812, of \$3000, and again of \$1500 in 1814; small amounts have been derived from taxes on balls and concerts, on representations of theatres and other amusements, and by pay patients; by a liberal grant from the State of Pennsylvania of \$10,000 (1816 to 1825); by successive sales of its real estate (1822-1826) below the city and on the corner of Bourbon and Main streets, and Bourbon and Levee street; by proceeds of gambling licenses.

“Since the abrogation of the act permitting gambling, more than two years since, from which it derived most of its support, (between \$30,000 and \$40,000 annually), it has had to depend upon loans from the banks on pledge of the municipal councils; upon a charitable donation from the Second Municipality; and during the last session of the Legislature \$100,000 of State bonds were granted it to pay its debts and for the support of the present year.

“In 1812 the Council of Administration sold to the State the square now occupied as the State House Square, and the buildings, for \$125,000, and purchased the square and built that large and commodious structure now occupied by it on Common street, at an expense of about \$100,000, sufficient for the accommodation of four or five hundred patients.”

Then follows a table showing the number of admissions

from 1831 to 1837, inclusively, and the nativity and occupation of the patients admitted and treated, who, in 1837, reached the figures of 10,427. During these same years out-door patients also received the benefits of the Hospital, just as obtains at the present day, and in 1837, there were 4330 of these out-door patients, who contributed toward swelling the grand total of 10,427 sick relieved. "This table gives some idea of the extent and nature of the utility rendered by this most valuable institution. It will be seen how small a proportion is furnished to citizens of this State, and how liberally and equably its charity is extended to laborers, mechanics and others. None are refused with evidence of destitution, though its by-laws and regulations require that a permit for admission shall previously be obtained from a member of the Council of Administration. The best accommodation is afforded to pay patients."

It is my pleasing duty to announce the completion of the various improvements to the hospital which were mentioned in the last Annual Report as being either in progress or in contemplation. These improvements were rendered possible, thanks to your Excellency's unflagging zeal and the munificent liberality of the contributors to the Building and Sewerage Fund, and begun at the instance of your Excellency. A full and detailed report of the improvements made to the Hospital will be found lower down, in its proper place, signed by the efficient secretary of the board, organized on this occasion into a Committee of the Whole. The character of these improvements is such as to enhance greatly the practical workings of the Hospital, and to place it on a plane with the most advanced establishments of its kind in the country.

Here I cannot refrain from mentioning particularly the perfect success of the System of Sewerage adopted, as it is undoubtedly the most valuable contribution ever made to the welfare of the patients and the surrounding section of the city.

In view of the wretched means of transportation of the sick

and wounded from various parts of the corporate limits of New Orleans to the Charity Hospital, the Board of Administrators have contracted for the early delivery of two ambulances, fully equipped with the most recent appliances. These ambulances will supply a want long felt in the community, and through the coöperation of the City Council, they will place the Hospital within easy and immediate communication with the victims of disease or injury who require transportation to its precincts.

While touching on the subject of improvements, the recent heartrending accounts of loss of life from fire in a public institution, in another section of the country, appear to me to afford matter for serious reflection on the part of every one connected with the administration of the Hospital. In the event of a conflagration occurring beneath its roof, are we fully prepared to meet the emergency? It will be answered that our water supply is practically unlimited; that we are in close proximity to one of the companies of our devoted fire department; that our hose and other apparatus are always ready for service; that we have large hallways and staircases, and that no danger need be apprehended. Still it should be remembered that these very halls and stairs act as flues during a fire, and that a large proportion of the inmates of a hospital are incapable of assisting themselves. I therefore very earnestly recommend this subject to the consideration of your Excellency and of my colleagues of the Board of Administrators.

The finances of the institution have been most seriously hampered during the past year, as will appear from the report of the Finance Committee.

Indeed, had it not been for the very arduous labors of that committee and the personal kindness of its chairman, and the valuable aid rendered them by the Treasurer of the Board, as well as for the assistance afforded by some of the financial institutions of this city, the Hospital would have been powerless to

carry on its noble mission of relief. As it is, some means should be promptly devised, for it is impossible to conduct the Hospital on any save a cash basis, and neither public liberality nor the assistance of monetary institutions can be depended on for any length of time.

During the year 1884 there were 7280 patients admitted into the Hospital, and 6245 discharged. There were 985 deaths, and the death rate was 12 per cent. The service for out-door patients extended the usefulness of the Hospital to 10,604 patients, thus demonstrating this year again the wonderful working of this plan of relief, devised by the House Surgeon, and implying much economy to the institution.

The newly-erected Pathological Department has enabled the Board to utilize very fully the invaluable teachings of their distinguished Pathologist, whilst adding to the material comfort of the sick and enlarging the sphere of utility of the Hospital, through various improvements erected upon the grounds during the past twelve months—and prominent among these is the opening, for the first time in our annals, of two wards for the treatment of diseases of children.

The Library has not been lost sight of, although it has been impossible, owing to pecuniary reasons, to make many additions to its contents. On account of the immense benefits to be derived from the possession of an adequate library, the Board of Administrators make an urgent appeal to the friends of the Hospital in this State and elsewhere, soliciting contributions of books treating of the various subjects relating to Medical Science.

Since the last Annual Report, Messrs. S. Boyd and H. Baldwin, having been appointed Administrators of the Charity Hospital by your Excellency, have efficiently taken part in the management of the institution.

It is my pleasant duty to state that the thanks of the Board

are due to the Sisters of Charity for their noble and self-sacrificing labors; to the House Surgeon and his Assistant for their unremitting zeal in the discharge of their duties; and also to the members of the Visiting Staff of Physicians and Surgeons, and to the corps of Resident Students; to the Pathologist; to the Secretary and Treasurer, whose position during the past year has been one of great difficulty, and who has performed his part in the most satisfactory manner; and also to the Attorney, the Chemist, the Clerk, and Engineer of the Hospital.

The Board of Administrators, appreciating the lively interest always manifested by your Excellency in the welfare of the great State institution under their charge, look forward confidently to the adoption of measures of relief to the finances of the Hospital, which they feel your Excellency's wisdom will not fail to suggest.

I have the honor of subscribing myself your Excellency's humble and obedient servant,

THOMAS LAYTON, M. D.,
Vice President Board of Administrators.

SECRETARY'S REPORT.

CHARITY HOSPITAL,

STATE OF LOUISIANA,

New Orleans, January 1st, 1885. }

To the President and Board of Administrators of the Charity Hospital:

Gentlemen—By authority of the Committee of the Whole and House Committee, I herewith present a summary of general improvements for the year just ended, originally entered into and completed under the auspices and superintendence of the Board of Administrators, composed of Dr. Thomas Layton, Vice President, and Messrs. M. D. Lagan, P. Buchanan, Richard Sinnott, H. W. Fairchild, Charles Lafitte, J. T. Gibbons and Dr. C. J. Bickham, to whom is to be added the name of Col. Samuel Boyd, as the successor of Mr. Lagan, resigned.

For the results obtained we are indebted additionally and in a great measure to the assistance of the citizens of New Orleans, and many of the parishes, whose liberality has testified to their enduring affection for the Charity Hospital of Louisiana. The sum realized from this voluntary source (\$33,485 79), added to the financial economy of the Board, by which \$37,323 86 has been and is to be transferred from the General Fund to the Building and Sewerage Fund, has enabled its management to place the institution on its present high plane of efficiency.

At the date of the last Annual Report, (January, 1884), the Sewer System, the New Extension and Dead House were reported in progress. Since then their full completion, together with a summary of other important work accomplished, deserve report at our hands. For purposes of convenience, we propose specific allusion to each.

The Sewer System, which was inaugurated May 6th, 1884,

may be briefly described as follows: Underground pipes, eight inches in diameter, connect the vaults of the Hospital premises with a central reservoir of 32,000 gallons capacity. These pipes are cleared at intervals by their connection with a system of flushing tanks. Twice or thrice daily the contents of the central reservoir are forced by a Blake pump through a six-inch underground pipe, into the Mississippi river. The sewer gases are conducted from the central reservoir through an escape pipe over the furnace of the engine room and are thus destroyed.

The Annex or New Extension, originally designed on plans submitted by Dr. A. B. Miles, House Surgeon, and built under the supervision of W. A. Freret, Esq., architect, in accordance with his architectural drawings, is a comfortably constructed two-story and attic brick edifice, with large, well lighted and wide corridors; wards ventilated according to modern hospital requirements (1000 and more cubic feet for each bed), linen rooms, mess rooms, dining rooms for convalescents, water closets, etc., and heated throughout by improved steam radiators. The building closely joins and forms a continuation of the old Female Department, which latter has been raised to the floor level of the annex by an elevation of two feet. The entire foundation is elevated some two feet and its ground thoroughly laid with the Fletcher sanitary flooring, thus ensuring preservation and dryness. The capacity of the new house is eighty-three beds for women and twenty-four cribs for children. It has been completely and newly furnished at a moderate expense. In connection with its furnishing, it is but grateful to recognize the fact that some of the ladies of our city bestowed upon it twenty-four cribs for infants with their full outfit. By the considerate kindness of his Excellency, Gov. S. D. McEnery, we have been enabled to place in a tower surmounting the annex, and especially constructed for the purpose, the famous Fournier clock, lately in use at the St. Louis Hotel State House. With its two well marked, and at night illuminated dials, we are

dispensing standard time to our inmates as well as the neighborhood. The new house was opened for the reception of patients on August 25th, 1884.

The new Dead House, opened September 1st, 1884, is located some eight feet interiorly from the wall on Locust street, on the most unobserved portion of the Hospital grounds. It is a two-story brick structure, dimensions 30x50 feet, containing on the ground floor the appointments of the Dead House proper—paved and wainscoted with slate stone—with a suite of rooms from which the dead who are claimed may be buried by relatives and friends; on the second floor the Pathological Laboratory and Museum of Pathology, two large, well lighted rooms, especially designed for the purpose.

The new Eye and Ear Operating Room, built of brick, is annexed to the Female Eye Ward (No. 40). It has been constructed with a view to light, and is furnished on three sides with large French plate glass windows.

In the main building, under the supervision of the House Committee, considerable improvements have been introduced. Nine new and improved ventilators have been placed in the roof; the old chimneys, now superseded by the steam radiators, have been converted into ventilating shafts, and conjointly have much benefited the interior atmosphere.

In the engine room, the new boiler—replacing the old one in use for twenty-six years—has been in operation for some months. The engine room has itself been enlarged, the wall on the Gravier street side increased in height and the whole roofed over.

The laundry has been added to by a new steam mangle.

The kitchen has been enlarged in its work by the introduction of a Bramhall, Deane & Co. Duplex Range, for cooking.

Three handsome planished copper urns, one of a capacity of

150 gallons, for water; two of a capacity of 100 gallons each, for tea and coffee, have been added, as well as five steam kettles for soups, one of 120 gallons capacity, two of 60 gallons each capacity, two of 40 gallons each capacity.

The kitchen has been newly flagged and zinced, and as auxiliary, two new vegetable closets have been established under the cisterns.

The work contemplated and in progress is the ambulance system, to consist of two improved ambulances and outfits, a covered gateway entrance into the Hospital grounds, on Howard street, and a properly designed house for stabling the ambulances and horses on the lots on Common street, opposite the Hospital. The improvement is much needed, and when introduced, is calculated to still further enhance the usefulness of the institution.

This and many other works of a like nature are needed to render the Hospital fully abreast with the progress of the day in these matters; and we rely upon the care of the State officially, and the often tested disposition of its people, to second our efforts in its behalf.

By authority.

Respectfully submitted,

EDWIN MARKS,

Secretary and Treasurer.

Approved:

THOMAS LAYTON, M. D.,

Vice President and Chairman Committee of Whole.

CHARLES LAFITTE,

Chairman House Committee.

FINANCE COMMITTEE'S REPORT.

NEW ORLEANS, January 5th, 1885.

To the Vice President and Board of Administrators:

Gentlemen—Your Finance Committee beg leave to report that they have examined the books and accounts of the Treasurer from time to time, and find the same correct. His report is an accurate financial exhibit of the fiscal condition of the Hospital for the past year.

We feel it a paramount duty to call the attention of the State authorities to the severe disabilities under which the Hospital has labored during the entire year, growing out of the non-payment of the warrants (\$43,750), and which comprises nearly one-half of the State's appropriation to the Hospital. For the major part of the year the State's ordinary warrants, such as ours are classed, have commanded but sixty cents on the dollar. To have disposed of them in the market at so large a discount would have insured a serious loss, entirely too great in view of the Hospital's large yearly expenditures. Therefore was it that individual members of the Board have had constantly to pledge their individual credit, sometimes on the warrants as collaterals, and again upon their own credit. By this plan the Hospital has been enabled to reach the end of the year with resources sufficient to pay its current liabilities for December, and discharge its indebtedness remaining on the buildings and Sewerage Fund, *that is, premising that the State will cash its 1884 warrants in the immediate future.*

We are fearful that a continuation of the non-payment on the part of the State throughout the coming year of its warrants will induce much financial trouble to the Hospital. We would urge prompt attention to this vital matter.

Respectfully,

JOHN T. GIBBONS,

Chairman.

TREASURER'S REPORT.

CHARITY HOSPITAL, STATE OF LOUISIANA.)
TREASURER'S OFFICE,
New Orleans, January 5th, 1885.)

To the President and Board of Administrators:

Gentlemen—It becomes my duty at the close of the fiscal year to present a summarized and comprehensive statement of the condition of the Hospital, in a financial point of view.

Owing to the fact that the State has left unpaid its whole issue of warrants for the year (\$43,750), the Board of Administrators have been obliged to execute their notes as a Board, as well as on individual credit, to the extent of \$41,000; \$7000 of which has been taken up, leaving \$34,000 due; to which is to be added \$3000 on call loans yet unpaid, making in all \$37,000 due within the next sixty days.

The high credit of the institution, earned by its promptness in the discharge of its current liabilities, has enabled the Board to hypothecate its State warrants in face of low prices for them in the market, and notwithstanding that a portion of the year, when money was most needed, was characterized by unusual stringency.

The receipts from auctioneers, for sales, have been prompt, the only difficulty encountered in collections being from Mr. C. E. Girardey, and on whose account litigation is now pending before the Supreme Court.

During the year the Hospital was left the sum of \$3000 by Mrs. Charlotte Piffet, deceased. Its payment is promised some time during the current month.

Additional insurance for three years from April 24th, 1884, has been taken out to the extent of \$30,000 on the late improvements, the New Extension, Dead House and Eye Ward. Twelve hundred dollars has also been placed on the sheds, shops, etc., on the lots opposite the Hospital, one year policy, from June 18th, 1884.

I present the annual statement of receipts and disbursements for 1884, the balance sheet of the books December 31st, 1884, the table of property, etc., owned by the Hospital, and a statement of its present cash resources and liabilities.

Respectfully submitted,

EDWIN MARKS,

Treasurer.

TREASURER'S OFFICE,
New Orleans, January 11th, 1885. }

The undersigned, having been duly appointed a committee to examine the accounts of the Treasurer, for the year ending December 31st, 1884, as provided for by Article 392, Revised Statutes, do hereby report that they have made the examination as contemplated, and find the books, accounts and statements true, just and correct.

CHAS. LAFITTE,
Chairman.
JOHN T. GIBBONS,
HENRY BALDWIN.

ATTORNEY'S REPORT.

NEW ORLEANS, January 1st, 1885.

To the President and Board of Administrators of the Charity Hospital:

Gentlemen—I have the honor to report that since your last annual meeting the suit against C. E. Girardey for return of sales amounting to \$2506 78, has been finally determined by the Supreme Court in favor of the Board, and the money paid over to the Treasurer.

The suit against David Bidwell for \$300 was decided in the lower court against him and he has appealed. Pending the appeal he has paid the money over to the Treasurer.

The suit of Louis Grunewald vs. The City of New Orleans and Charity Hospital was decided favorably to the Board, and Mr. Grunewald has paid over the license to the Treasurer.

C. E. Girardey, having failed and refused to make settlement for return of sales in conformity to late judgment of the Supreme Court, was, in August last, deprived of his license as an auctioneer by the Auditor of State, whereupon he instituted legal proceedings in the District Court for the parish of Baton Rouge, by mandamus to compel the Auditor to rescind the order revoking his license and to reinstate him as a licensed auctioneer.

The suit to which your Honorable Board was made a party was decided against him on the 20th day of November last, and he has again appealed to the Supreme Court. The final decree is expected in March next.

I have brought suits against the master and owners of the vessels who have violated the pilotage laws of the State for penalties of \$100 in each case, and expect favorable results from the litigation.

Respectfully submitted,

S. S. CARLISLE,

Attorney.

PROPERTY OF CHARITY HOSPITAL,

DECEMBER 31st, 1884.

REAL ESTATE.

Hospital grounds and improvements.
Union Cotton Press, thirteen lots.
Shippers' Press, four lots.
Cemeteries, two lots.

\$150,000 00

In Memoriam.

DR. SAMUEL M. BEMISS.

The following action was taken by the "Board of Administrators of the Charity Hospital," at their regular meeting, held November 21st, 1884:

[Extract from the Minutes.]

* * * * * * * * *

"The Vice President, Dr. Thomas Layton, vacated his chair, requesting Mr. Charles Lafitte to assume it, and thereupon offered the following preamble and resolutions, after having premised them with appropriate remarks:

"Whereas, it has pleased the Almighty to remove suddenly from Earth Dr. S. M. Bemiss, who filled the chair of 'Theory and Practice of Medicine' in the Medical Department of the University of Louisiana, and who, for the past eighteen years, was a member of the staff of visiting physicians of this institution, and

"Whereas, during the long connection of Professor Bemiss with the Charity Hospital of this city, his manifold qualities of mind and heart were each day more clearly revealed by his unflagging zeal in the discharge of his duties, by his unvarying courtesy to all with whom he was thrown into contact, and by his tender sympathies for the sufferers under his care;

"*Be it resolved*, That the 'Board of Administrators of the Charity Hospital of the State of Louisiana' deem it a duty to place on record a testimonial of their sorrow at the untimely demise of one so generally respected and honored in this community, and to convey, through their Secretary, to the bereaved family of the deceased their sentiments of respectful condolence;

"*Be it further resolved*, That a special page of the Annual Report of this Hospital for the ensuing year be set apart for the inscription of the action taken by the Board of Administrators on this occasion.

"The preamble and resolutions were unanimously adopted."

* * * * * * * * *

A true extract from the minutes.

NEW ORLEANS, January 1, 1885.

EDWIN MARKS,
Secretary.

ANNUAL REPORT OF THE HOUSE SURGEON.

NEW ORLEANS, December 31st, 1884.

To the President and Board of Administrators:

Gentlemen—I have the honor to present the annual report of my office, and herewith the records of the medical service.

MEDICAL STATISTICS.

The number of patients remaining at the last report, 620, added to the admissions of the year, 7280, makes a total of 7900 inmates treated; white, 6077, colored, 1800; deserted and unrecorded, 23.

The largest number under treatment at one time was 704, on the 4th of February; the smallest, 493, on the 7th of July; daily average of inmates, 590; daily average of admissions, nearly 20.

Of the patients treated, 6245 were discharged; cured, 4036, or 51 per cent.; improved, 1596, or 20 per cent.; unimproved, 613, or 7 per cent.

There were 985 deaths; white, 582, colored, 403. The death rate of the white, 11 per cent.; colored, 22 per cent.; total mortality, 12 per cent. Deducting 161 deaths within twenty-four hours after admission, the annual mortality is reduced to 10 per cent.

PREVALENT DISEASES.

There were 3626 cases of malarial disease—45 per cent. of the inmates treated; 1009 from the country; 1261 from New Orleans, 536 of whom had lived in the city one year or more, 725 less than one year. There were 95 deaths of malarial diseases—a death rate of 23 per cent., or 9 per cent. of the deaths from all causes.

There were 268 cases of pulmonary consumption, 64 of whom were natives of Louisiana, 137 residents one year and more, 67

invalids from other States, invited by the advertised benefits of our climate. The death rate of this disease is startling—41 per cent., or 11 per cent. of the deaths is from all causes. Past reports of the Hospital present similar figures, and my experience convinces me that the very low altitude, the excessive humidity of the atmosphere and the variable climate of New Orleans, during the seasons when most of these invalids come, are conditions most unfavorable for phthisical patients.

OUT-DOOR DEPARTMENT.

The records, herewith presented, show the attendance of 10,604 visiting patients; white, 7636, colored, 2968. We have aimed to more thoroughly organize this department for the benefit of the out-door poor. True, some take unworthy advantage of this charity, but the vast majority seeking relief are very destitute. These patients are treated without expense to the Hospital, save the cost of record books and material for surgical dressings. Many patients are treated in the out-door clinics, who would otherwise be admitted into the Hospital, thus sparing the expense of maintaining them as inmates. The out-door service, therefore, proyes an economy in the management of the Hospital, and, at the same time, widely extends its charity.

It is desirable to conduct the service of the in-door and out-door department separately, as far as practicable.

RECAPITULATION.

All told, counting inmates, 7900, and out-door patients, 10,604, the Hospital gave relief, during the year, to a grand total of 18,504 sick.

Observe that the number of out-door patients exceeds the admissions by 3324.

Compared with the last Annual Report, there were 252 less inmates treated, but 1835 more attended in the out-door clinics, thus adding 1583 to the total sick list of the year.

CLINICAL AND CLERICAL RECORDS.

There has been marked improvement in the method of keeping the clinical records. We are striving to enhance their statistical value.

The clerical records are kept with such system as to allow us, immediately after the close of the year, to make the annual summary, with tables classifying the disease of each patient.

MEDICAL AND SURGICAL SUPPLIES.

The Hospital has been supplied during the year with many instruments and appliances useful in the diagnosis of disease and necessary in the treatment of injuries. New dressings are used in the surgical service, the reduced cost of which, at the close of the year, is an item of economy. The new field stretchers and rolling litters improve very much the means of handling patients more comfortably.

SURGICAL OPERATING ROOMS.

In the Amphitheatre, or general operating room, alterations and additions have been made, which very much facilitate surgical work and make immediate provisions for emergencies.

The new Eye and Ear Operating Room is a valuable acquisition to this special surgery. It is by construction well adapted to its purpose, and furnished with the best means employed in the treatment of these special diseases. In September, a valuable case of test lenses was donated to this service by Mr. Alfred Grima, in memory of his brother, Dr. V. Grima, whose name is honored in the annals of the Hospital.

The Gynaecological Operating Room and ward annexed, designed in the construction of the new building, prove a useful addition to the Hospital. The necessity of establishing this service had become more and more urgent with the development of this progressive specialty.

HOUSE FOR WOMEN AND CHILDREN.

For many years the Female Department was over crowded, patients grouped in wards without proper discrimination of disease, and children, scattered through the house, treated under conditions most unfavorable. The new house, so strongly urged in my first annual report, now completed and occupied, is an inestimable benefaction to the women and children. Designed with the view of proper light and ventilation, with ward appointments suited to the exigencies of the medical service, the house fulfills its purpose perfectly, providing 77 beds and 7 wards for women, 24 cribs and 2 wards for children. The increase of bed-room relieves the overcrowding of the Female Department, and allows the beds to be properly spaced in sufficient cubic capacity, (1000 to 1200 cubic feet). The increased number of wards permits the proper classification of diseases; and, moreover, establishes a separate department for children, a necessity which had existed from the founding of the Hospital.

The Hospital now contains 700 beds and cribs, arranged in 52 wards, which have recently been renumbered and classified as follows:

CLASSIFICATION OF WARDS.

Wards.	WHITE.		COLORED.		Total.
	Male.	Female.	Male.	Female.	
Medical.....	17	3	3	1	24
Nervous Diseases.....	1	1	*	*	2
Pay Ward.....	1	1
Boys' Ward.....	1	1
Surgical.....	6	4	3	1	14
Venereal.....	1	1	*	*	2
Eye and Ear.....	1	1	*	*	2
Gynaecological.....	..	1	..	1	2
Obstetrical	1	..	1	2
Children	1	1	*	*	2

* Patients treated in other wards.

The ward service of the Hospital would be additionally improved by opening reception rooms for patients admitted in a dying condition or entered at night; isolating wards for patients suffering of contagious diseases; and fitting up an improved electrical apparatus in connection with the wards for nervous diseases.

PATHOLOGICAL DEPARTMENT.

The annual report of the Pathologist shows work of great value in the diagnosis of disease. The erection of the new building of this department is an important improvement of the year. The Dead House proper is well adapted in all its appointments, and the private rooms adjoining allow suitable burial for the claimed dead. The permanent founding of a Pathological Laboratory and Museum of Microscopy and Pathology is a notable event, and will provide means of preserving many specimens of great value in the study of disease. These specimens should be preserved more permanently in the proper museum jars.

HOSPITAL MEDICAL LIBRARY.

The Library now contains 2127 bound volumes and 375 unbound periodicals, and is specially commended to the care of the Board. The creation of a Library Fund would direct attention, and doubtless invite contributions to a purpose so useful. Acknowledgments are due the contributors of the past year, a list of whose names is herewith presented.

HOSPITAL AMBULANCE SERVICE.

The old way of conveying the sick and injured to the Hospital in city wagons and vehicles improvised of every fashion, has been the cause of much distress to patients, and detriment in their after-treatment. In humane care of the sick and wounded it has become necessary to provide better means of transporting them to the Hospital. Commissioned by the Board to purchase ambulances for the Hospital, and granted leave of absence on the 1st of September, I visited the Eastern cities, and thoroughly

inspected the ambulance service in connection with the large metropolitan hospitals. Two ambulances are now being made to order, with modern provision for all emergencies, and early in the coming year the Charity Hospital Ambulance Service will be inaugurated. In cases of surgical accident the service will supply medical aid on the spot, and attendance in transit to the Hospital. Rules and regulations for this service will in time be submitted.

The erection of a building suited to the needs of the Ambulance Corps would very much facilitate the working of this service, and is respectfully recommended, should the means of the Hospital ever permit.

SANITATION.

The River Sewer System, in use since May 6th, has proved as efficient in its working as perfect in its mechanical construction, and improved immeasurably the sanitary surroundings of the Hospital. This system will not be entirely complete until the Hospital is supplied with an improved style of water-closets. In this connection, better bathing facilities are required for patients.

The ventilation of the main building has improved greatly the hygiene of the house, and enabled us to treat the medical diseases of the upper floors to far better advantage. However, freer communication between the halls and wards, by gratings below and transoms above, would additionally benefit the ventilation, and better equalize the temperature of the house when heated by steam.

ACKNOWLEDGMENTS—CONCLUSION.

In reporting favorably on the work of the several branches of the medical service, I beg to express my indebtedness to the Assistant House Surgeon and other officers associated with me in charge of their respective departments. The gentlemen of the Visiting Staff are also commended in the most cordial terms.

The work of the year has been saddened by the sudden death

of the senior visiting physician. The influence of his counsels and the example of his faithful, efficient work have contributed largely to the reputation of this charity. A separate page is appropriately inscribed to his memory.

To the Sisters of Charity in charge of the domestic service we owe acknowledgments for the clean, exceptionally tidy and orderly condition of the household; and for their unfaltering faithfulness, night and day, in the care of the sick, which contributes so much to the comfort of patients and their successful treatment, assurances of grateful recognition.

Thanks are due to friends of the Hospital for many acts of kindness to the sick and convalescent. Many books, periodicals and papers were received and distributed among the patients. I fully concur in the proposition to provide a place for the more permanent preservation of this literature.

In concluding the report of 1884, a year so eventful in the history of the Hospital, effecting changes and improvements in every department of the service, some of such beneficence as to make your administration ever memorable, I feel an exceeding pleasure in congratulating you upon the new era of usefulness which the Hospital enters with the beginning of the new year.

Respectfully submitted,

A. B. MILES,

House Surgeon.

ANNUAL REPORT OF THE PATHOLOGIST.

To the Hon. Board of Administrators of the Charity Hospital:

Gentlemen—I beg to report the following work, done in this Department during the year ending December 31st, 1884:

Specimens of Urine examined.....	1580
Specimens of Sputa examined.....	66
Specimens of Tumors examined.....	48
Specimens of Fluids examined.....	51
Number of Post-mortems held.....	97
Number of Sections cut.....	1059
Number of Microscopical Sections permanently mounted	426

Sections of several organs from one suspected case of Yellow Fever, were examined during the month of July.

Respectfully submitted,

H. D. SCHMIDT,

Pathologist.

LIST OF DONORS AND THEIR CONTRIBUTIONS
TO THE
CHARITY HOSPITAL MEDICAL LIBRARY.

DR. GUICE, Fayetteville, Miss. 30 miscellaneous volumes.

SENATOR B. F. JONAS, through Dr. S. E. Chaillé. Reports for 1880, 1882, and 1883, National Board of Health.

DR. WM. MARTIN, U. S. N. Report of Secretary, U. S. N., 1883. Report of Surgeon General, U. S. N. 1879. Hygienic Medical Reports, 1879.

DR. H. D. BRUNS loaned 133 miscellaneous volumes and 60 periodicals.
